MELSEC-Q Built-in unit

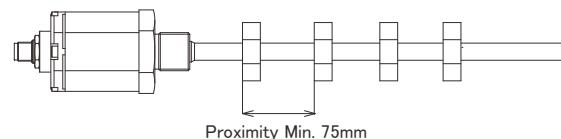

This unit is the converter for GY probe, which can be built into PLC MELSEC-Q (Mitsubishi). One unit can be associated with 1 probe (1 axis) or 2 probes (2 axes) and stores digital position data (Binary code). The CPU unit can read the data through the buffer memory.

Specifications

No. of probe	1 axis or 2 axes
Resolution	Programmable Min.1 μ m(G1), Min.0.1mm(G2,G3)
Sampling freq.	1kHz (STD) (up to stroke 1000mm)
I/O occupation points	Intelligent, 32 points
current consumption	1 axis:0.7A(5VDC), 2 axes:0.9A(5VDC)
function	external preset, upper and lower limit
cable length	Max. 200m(G1, G2) Max. 100m(G3)
working temp.	0°C~+60°C
storage temp.	-20°C~+75°C

option : multi magnets type (DC-Q10-G1-S01)

Detecting Max. 32 pcs magnets position on one probe simultaneously.

Model

DC-Q□0□-□□

① ② ③ ④

① No. of probe

1:1 axis
2:2 axes

② Application

blank: FA industry
H : steel industry (resin coating against humidity)

③ Probe type

G1: GYMR6, GYSE-R(*1), GYcRS, GYFRS,
GYKMR, GYHTR(*2), GYRHP-MR6, EX-GYdT-R
G2: GYcRP, EX-GYdS-R
G3: GYHR
(*1)special shield connection
(*2)Min. resolution is 0.05 mm

④ Option(1 axis type only)

blank: without option
P : with pulse output
-S01: multi magnets type
